Textured Wood Grain PVC Foil For Kitchen Cabinet Door And Couter Top

Product Description:

Material:

The key ingredient in our PVC foil is Polyvinyl Chloride (PVC), a synthetic plastic renowned for its strength, flexibility, and ease of processing.

Appearance:

We offer a diverse selection of colors, patterns, and textures for our PVC foil. It is a cost-effective alternative to real materials such as wood, stone, fabric, or metal, providing the same authentic aesthetic at a premium value.

Adaptability:

Our foil is highly versatile and can be applied to a variety of surfaces, including walls, doors, cabinets, and furniture. With its effectiveness on numerous surfaces, it can enhance the interior of any space.

Durability:

Known for its resilience and resistance to degradation, Realsun Deco PVC foil is a popular choice for high-traffic areas due to its durability and longevity.

Maintenance:

Once installed, our PVC foil requires minimal maintenance. A simple wipe down with a damp cloth once a week is all it needs to retain its pristine appearance.

Economical:

One of the major advantages of using PVC decorative foil is its affordability compared to natural materials. It provides sophisticated aesthetics at a fraction of the cost, making it an ideal choice for any budget.

Modification:

Manufacturers offer a vast array of styles and finishes for PVC foil, allowing for customization to meet project requirements and satisfy individual design preferences.

Application:

Decorative PVC foil is commonly used for wall paneling, furniture surfaces, retail displays, interior doors, kitchen and bathroom cabinets, and other uses in both residential and commercial settings.

Features:

Product Name: Wood Grain PVC Film

Application: Furniture, Wall Panel, Cabinet, Door, Floor, Ceiling, Etc.

Thickness: 0.1mm-0.5mm

Length: 100m-400m

Payment Term: T/T, L/C, Western Union, Etc.

Applications:

Different Processes for Different Applications:

1. Membrane Press (Vacuum Press)

The membrane press (also known as vacuum press) is suitable for covering materials with a thickness ranging from 0.20mm to 0.50mm. It can cover widths of 1260mm and 1400mm, and lengths of 100-300m per roll. This process is suitable for various materials such as MDF, particleboard, wooden board, and fiberboard. It is commonly used for doors, kitchen cabinets, wardrobes, and other furniture items. It can also emboss the board and cover all five surfaces at the same time.

2. Wrapping Profiles

The wrapping profiles process involves covering materials with a thickness of 0.12-0.18mm and widths between 40-1260mm. The length of each roll can range from 300-800m. This process is suitable for wood profiles, aluminum profiles, PVC profiles, and other types of profiles. It is commonly used for door frames, window sills, base channels, PVC ceilings, and more.

3. Cold Laminating

Cold laminating is suitable for covering flat panels such as wood, steel, aluminum, and PVC. The process can cover materials with a thickness of 0.12-0.20mm and widths of 1240-1260mm. Each roll can have a length of 300-500m. This process is commonly used for doors and furniture items.

4. Hot Laminating

Hot laminating involves covering materials with a thickness of 0.16-0.30mm and a width of 1260mm. Each roll can have a length of 200-300m. This process is suitable for covering PVC panels, steel panels, and aluminum panels for doors, skirting, and other applications.

5. Self-Adhesive

The self-adhesive process is suitable for materials with a thickness of 0.10-0.20mm and widths of 600mm or 1220mm. Each roll can have a length of 5-50m. This process is versatile and can be used on any smooth surface for furniture and indoor decorations.

Customization:
