Customized Wood Grain PVC Foil For Cabinet And Furniture Decorative

Product Description:

Material:

The primary ingredient used in our PVC foil is Polyvinyl Chloride (PVC), a synthetic plastic known for its strength, flexibility, and ease of processing.

Appearance:

We provide a wide range of options for our PVC foil, including various colors, patterns, and textures. It is designed to imitate the appearance of natural materials such as wood, stone, cloth, and metal, while being more affordable and maintaining a premium look.

Adaptability:

Our foil is suitable for a variety of surfaces, including walls, doors, cabinets, and furniture. It can be effectively applied in various interior spaces, making it a versatile choice.

Durability:

Known for its strength and resistance to deterioration, Realsun Deco PVC foil is highly durable. This makes it a popular choice for high-traffic areas where longevity is crucial.

Maintenance:

Once installed, our PVC foil requires minimal upkeep. Simply wipe it down with a wet cloth once a week to keep it looking its best, making maintenance easy and hassle-free.

Economical:

One of the main advantages of decorative PVC foil is its lower cost compared to natural materials. It allows for the creation of sophisticated aesthetics without the associated high costs, making it a cost-effective option for many projects.

Modification:

Manufacturers offer a wide range of styles and finishes for PVC foil, making it easy to modify and meet project requirements and individual design preferences.

Application:

Decorative PVC foil is commonly used for wall paneling, furniture surfaces, retail displays, interior doors, kitchen and bathroom cabinets, and other applications in both residential and commercial settings.

Features:

Product Name: Wood Grain PVC Film

Width: 1260mm, 1400mm

Payment Term: T/T, L/C, Western Union, Etc.

Surface: Glossy/ Matt/ Embossed/ Textured/ Supper Matt/ Soft Touch

Length: 100m-400m

Material: PVC

Features:

High-quality wood grain PVC foil

Perfect for furniture, doors, and kitchen cabinets

Flexible payment options

Durable and long-lasting

Easy to clean and maintain

Provides a glossy, matte, embossed, textured, super matte, or soft touch surface

Can be easily cut and applied

Comes in rolls of 100m to 400m for different project sizes

Applications:

Different Processes for Different Applications:

1. Membrane Press (Vacuum Press)

Thickness: 0.20-0.50mm

Width: 1260mm, 1400mm

Length: 100-300m/roll

This process is used to cover materials such as MDF, particleboard, wooden board, and fiberboard with a thin layer of material. It is commonly used for creating doors, kitchen cabinets, wardrobes, and furniture. The membrane press also has the ability to emboss the surface of the material and cover all five surfaces at once.

2. Wrapping Profiles

Thickness: 0.12-0.18mm

Width: 40-1260mm

Length: 300-800m/roll

Wrapping profiles involves covering various types of profiles, including wood, aluminum, and PVC, with a thin layer of material. This process is typically used for creating door frames, window sills, base channels, and PVC ceilings.

3. Cold Laminating

Thickness: 0.12-0.20mm

Width: 1240-1260mm

Length: 300-500m/roll

Cold laminating is used to cover flat panels such as wood, steel, aluminum, and PVC with a thin layer of material. This technique is commonly used for creating doors and furniture.

4. Hot Laminating

Thickness: 0.16-0.30mm

Width: 1260mm

Length: 200-300m/roll

Similar to cold laminating, hot laminating is used to cover materials such as PVC, steel, and aluminum with a thin layer of material. This process is typically used for creating doors, skirting, and other similar applications.

5. Self-adhesive

Thickness: 0.10-0.20mm

Width: 600mm/1220mm

Length: 5-50m/roll

The self-adhesive process involves applying a thin layer of material to any smooth surface. It is commonly used for furniture and indoor decorations.
