100m-400m Length Decorative PVC Foil Easy To Clean For Easy Cleaning

Product Description:

Material:

The main ingredient of our PVC foil is Polyvinyl Chloride (PVC), a synthetic plastic known for its excellent strength, flexibility, and ease of processing.
Appearance:

We pride ourselves on offering a wide variety of colors, patterns, and textures for our PVC foil. With the ability to imitate the appearance of real materials such as wood, stone, cloth, or metal, our foil provides an affordable option while maintaining a premium look.
Adaptability:

Our foil is designed to be versatile and suitable for a variety of surfaces, including walls, doors, cabinets, and furniture. It can be applied to many different spaces, making it a great choice for interior design projects.
Durability:

One of the most well-known qualities of Realsun Deco PVC foil is its strength and resistance to deterioration. This durability makes it a popular choice for high-traffic areas.
Maintenance:

After installation, our PVC foil requires minimal maintenance. A simple weekly cleaning with a wet cloth is all it takes to keep it looking its best.
Economical:

Compared to natural materials, the primary advantage of decorative PVC foil is its lower cost. This allows for the creation of sophisticated aesthetics without incurring high costs.
Modification:

Manufacturers offer a variety of styles and finishes, providing the opportunity for modification to meet project requirements and individual design preferences.
Application:

Decorative PVC foil is commonly used for wall paneling, furniture surfaces, retail displays, interior doors, kitchen and bathroom cabinets, and other purposes in both residential and commercial settings.

Features:

Product Name: Wood Grain PVC Film

Feature: Waterproof, Anti Flame, Easy To Clean

Packing: Pack In Roll With Foam Sheet, Kraft Paper And Plastic Sheet

OEM: Available

Thickness: 0.1mm-0.5mm

Payment Term: T/T, L/C, Western Union, Etc.

Product Type: PVC Foil for Furniture

Application: Ideal for furniture surface decoration

Design: Wood grain pattern

Applications:

Different Process for Different Application

There are various processes available for covering different surfaces depending on the type of application. These processes include membrane press, wrapping profiles, cold laminating, hot laminating, and self-adhesive. Each process has its own specifications in terms of thickness, width, and length of the covering material.
Membrane Press (Vacuum Press)

Membrane press or vacuum press is suitable for covering surfaces with a thickness ranging from 0.20-0.50mm and a width of 1260mm and 1400mm. The length of the covering material can range from 100-300m per roll. This process is commonly used for covering MDF, particleboard, wooden board, fiberboard, etc. and is commonly employed in making doors, kitchen cabinets, wardrobes, furniture, and more. The membrane press is also capable of covering embossed boards and can cover up to five surfaces simultaneously.
Wrapping Profiles

This process involves covering a wide range of profiles, including wood, aluminum, and PVC profiles, with a thin layer of material. The thickness of the covering material used for wrapping profiles ranges from 0.12-0.18mm with a width of 40-1260mm and a length of 300-800m per roll. It is commonly used for door frames, window sills, base channels, PVC ceilings, and other similar applications.
Cold Laminating

Cold laminating is a process used for covering flat panels with a covering material. The thickness of the covering material ranges from 0.12-0.20mm with a width of 1240-1260mm and a length of 300-500m per roll. This process is suitable for various flat panels such as wood, steel, aluminum, and PVC panels and is commonly used in making doors and furniture.
Hot Laminating

Similar to cold laminating, hot laminating is also used for covering panels, but with thicker materials. The thickness of the material used for hot laminating ranges from 0.16-0.30mm with a width of 1260mm and a length of 200-300m per roll. This process is commonly used for covering PVC panels, steel panels, and aluminum panels, to create finishes for doors, skirting, and other interior elements.
Self-Adhesive

This is a unique process that involves using a self-adhesive covering material for smooth surfaces. The thickness of the material used for

self-adhesive ranges from 0.10-0.20mm with a width of 600mm or 1220mm and a length of 5-50m per roll. It can be easily applied to any smooth surface for various applications such as furniture and interior decorations.

Customization:

Customization Service for Wood Grain PVC Film

Brand Name: Realsun Deco

Place of Origin: Foshan, China

Minimum Order Quantity: 3000m/model
